**Medici** system with PerkinElmer detector used in veterinary practice in Haarlem/Netherlands

„We at the Dierenziekenhuis veterinary clinic in Haarlem have recently started to work with the **Medici**, OR Technology's DR upgrade kit, with a wireless Perkin Elmer detector and we are utterly satisfied by this digital X-ray solution.

We chose the PerkinElmer detector because it provides by far the best image quality in comparison with other products. Especially for us as a referral clinic mostly for orthopedic and abdominal interventions, precise diagnoses are prerequisites to determine the adapted therapies.“

# Upgrading to digital made easy

You know the problem: Your X-ray system is not even that old and works perfectly. Yet as a progressive veterinary surgeon you would now like to create your X-ray images digitally and benefit from all the advantages of this technology.

CR systems are not an option for you since digitalisation with a flat panel (DR system) offers many additional advantages, mainly better image quality and hardly any servicing costs. Therefore you would like to extend your existing X-ray system by a flat panel system and are looking for a complete upgrade kit that is easy to install, easy to operate and provides X-ray images in a professional and reproducible quality.

**Medici** systems are available for almost any existing X-ray system. Various makes and sizes of flat panels allow your system to be configured according to your needs. The **dicomPACS®DX-R** acquisition software can be operated intuitively via a touchscreen, adjusts to your work routine and provides X-ray images in a reproducible, extremely high quality.

Of course, all **Medici** systems can be integrated into your practice management software and transfer the X-ray images to an image management system (PACS). If you have not yet installed such an image management system but still require the images to be distributed within your veterinary practice or veterinary hospital, or to colleagues or animal owners via the internet – no problem: Our **dicomPACS®vet** image processing system will do just that.
